Big Tech & Corporate

High performance requires systemic recovery — for founders,
executives and key employees.

Personally. Systemically. Confidentially.

High performance requires systemic recovery

Companies invest in team effectiveness, yet increasingly face the consequences of chronic overload:

- Emotional burnout
- Reduced concentration
- Sleep problems
- Exhaustion of the nervous system
- Loss of resilience among key employees

Sometimes an employee needs not a vacation, but managed recovery.

A private medical residence on the Adriatic coast

Garden Recovery is a closed format for people who need systemic recovery of their physical, intellectual and psycho-emotional state. An environment in which a person who has lost their footing again remembers what inner order, clarity, a taste for life and engagement in work feel like.

Our task is to help a person restore:

- Resource
- Cognitive resilience
- Concentration
- Quality of sleep
- The ability to function in an intensive environment

We combine:

- Medical supervision
- Psychological support
- Physiotherapy
- Nutrition science

This is not a retreat or a form of wellness tourism. It is a managed recovery environment, created for those for whom regaining resource matters.

States in which the body stops coping with the load

Our programs are suited for:

- Founders
- Top managers
- Key employees with a high level of responsibility
- Leaders in a phase of intensive growth

Often a person keeps working, but is already losing:

- Resilience
- Energy
- The ability to recover
- Emotional control

These states are not compensated by rest, which is why systemic recovery is needed.

Employee recovery is part of business resilience

High-performing teams are built not only on managing results, but also on a system that supports resource and emotional resilience.

Garden Recovery helps to:

- Reduce the consequences of chronic stress
- Sustain the resilience of key employees
- Reduce the risk of emotional burnout
- Improve the quality of recovery after intensive periods
- Create additional value inside the executive wellbeing ecosystem

For many companies this is becoming part of a modern culture of care for the human resource.

Recovery as a systemic process

01 Consultation

We record the initial state and the request, and set the direction of recovery.

02 Diagnostics

We study the body as a single system and identify the causes behind the changes in state.

03 Protocol

We build a personal recovery program based on the diagnostic results and observe the dynamics of the state.

04 Intensive

We create the conditions for a deep reset of the body and the restoration of physical strength and emotional resource under specialist supervision.

05 Stabilization

We assess and consolidate the result and build a strategy for sustaining progress after the program.

Executive Recovery

Recovery after chronic stress, emotional burnout, high loads and the misuse of mood modifiers.

Body Balance Reset

Work with metabolic balance, eating behavior and the restoration of the body's internal processes.

Post-Surgery Recovery

Recovery after surgical interventions and medication load.

Human Reserve

Preventive support of resource under high intellectual, emotional and physical loads.

The space shapes the state

Garden Recovery is located in the Sveti Stefan area, Montenegro. A quiet, private environment, the sea, the climate and the absence of information noise become part of the recovery process.

We create conditions in which a person can:

- Lower the level of tension
- Restore sleep and concentration
- Regain inner support
- Restore physical and emotional resource

Privacy, aesthetics and respect for personal boundaries are an essential part of the Garden Recovery environment.

Confidentiality is a mandatory condition of recovery

We understand the specifics of the work of founders, executives and high-profile clients.

All programs:

- Are carried out confidentially
- Are composed individually
- Begin only after a doctor's consultation
- Are based on the principles of evidence-based medicine

We work strictly within professional ethics.

Flexible integration into the corporate wellbeing ecosystem

Garden Recovery can become:

- Part of executive wellbeing programs
- An additional recovery tool for leadership teams
- A solution for recovery after intensive periods
- A private format of support for key employees

We adapt the format of cooperation to the company's structure and the required level of confidentiality.

Resilience begins with the person's resource

High performance is impossible without recovery. Garden Recovery creates a space where a person can:

- Restore inner resource
- Regain clarity and resilience
- Preserve the ability to function at a high level

Personally. Systemically. Confidentially.

REQUEST A CONSULTATION

We adapt the format of partnership to the structure of your company and the required level of confidentiality. All details are discussed privately with a Garden Recovery specialist.
